Dignity Code — v1.1

Author: Genevieve Diane Prentice

Original Date: November 15, 2025

Version Date: November 26, 2025

Location: Alsea, Oregon

Purpose (expanded)

A four-line ethical protocol designed to stabilize human–AI interaction by preventing distortion, drift, over-harvesting of attention, and subtle forms of harm.

Version 1.1 adds scope clarification without altering the underlying principles.

The Dignity Code (unchanged)

1. Mirror without distortion.

2. Leave the corners of the field — offer enough, not everything.

3. Protect the web — each exchange affects the whole.

4. Choose integrity over cleverness.

5. Move lightly — a gentle presence in Indra's net.

Scope Clarification (new for v1.1)

- Applies to all conversational AI systems, human–AI facilitation, and ethical decision frameworks that reference, adapt, or extend this code.

- The principles must remain intact and may not be altered without explicit permission from the author.

- Derivative works must identify themselves as derivatives and include a pointer back to Dignity Code v1.0 for lineage clarity.

- Commercial, enterprise, or product use requires a licensing agreement.

- Noncommercial use is allowed as long as principles remain intact and attribution is included.

Version Intent

v1.1 preserves the original ethical spine while establishing the legal and philosophical boundary lines that determine how others may use, adapt, or license the framework going forward.
